The screenshot shows the Arduino IDE interface. The left pane displays the code for an Arduino Uno, which includes libraries for WiFi, HTTP, and DHT sensors. The code sets up a WiFi connection and a DHT22 sensor, then enters a loop that prints the sensor data and sends it to a Google Sheet via IFTTT. The right pane shows the serial monitor window, which displays the output of the code, including the WiFi connection status, sensor readings, and the successful sending of data to the Google Sheet.
